ABOUT THE NATIONAL KIDNEY FOUNDATION

Fueled by passion and urgency, NKF is a lifeline for all people affected by kidney disease. As pioneers of scientific research and innovation, NKF focuses on the whole patient through the lens of kidney health. Relentless in our work, we enhance lives through action, education and accelerating change. The NKF Konica Minolta Golf Classic raises more than \$3 million per year, totaling more than \$100 million since inception, to fight kidney disease.

- Are You the 33%? Millions of adults in the U.S. are walking around with kidney disease and don't even know it. In fact, of the 37 million adults in the U.S. with kidney disease, more than 90 percent don't know they have it. The "**Are You the 33%?**" campaign aims to empower people to take action, know their kidney risk and talk to their doctor.
- Take a simple, one-minute quiz to find out if you're at risk, **MinuteForYourKidneys.org**. It could save your life. Knowing you're at risk is the first step to taking on a healthier life, so why not find out where you stand?
- 1 in 3 adults in the U.S. is at risk for kidney disease.
- Kidney disease, sometimes called chronic kidney disease or CKD, causes more deaths than breast cancer or prostate cancer. CKD means your kidneys are damaged and losing their ability to keep you healthy.
- Every 30 minutes, your kidneys filter all the blood in your body, removing waste and excess fluid.
- Adults with CKD are at a higher risk of early death compared to adults without CKD of the same age. (CDC) Over 50,000 people died from kidney disease in 2017.
- CKD accounts for more than \$100 billion in annual Medicare costs.
- Risk factors for kidney disease include diabetes, high blood pressure, family history, and age 60+.
- Some racial and ethnic minority groups are at increased risk for kidney disease.
- The best treatment of CKD is facilitated by early detection, when the disease can be slowed or stopped. Early treatment includes diet, exercise, medications, lifestyle changes, and treating risk factors like diabetes and hypertension. However, once kidneys fail, treatment with dialysis or a kidney transplant is needed.
- Almost 100,000 people are waiting for a lifesaving kidney transplant.
